

AVG AntiVirus

AVG's award-winning antivirus protection detects, blocks, and removes viruses and malware from your company's PC's and servers. And like all of our cloud services, there are no license numbers to keep up with.

How does this benefit you?

Protects while browsing

Works with any web browser to check files before they're downloaded and scans URLs to protect your employees and your network while online.

Verifies links before you click

Actively checks web links before they're clicked to prevent your employees from visiting malicious websites. Also provides automatic, real-time scans of any links exchanged on Facebook®, Twitter®, or Skype®.

Blocks hackers

Our firewall works on both wired and wireless networks to protect your company's data and prevent malware from taking over your PC's. With inbound and outbound port and application protection, your business is always protected.

Scans without distractions

AVG Smart Scanning reduces distractions. Scans run only when your employees are not using their PC's, and switch to low-priority mode while they're working.

Protects identity

If your employees shop online, we'll warn them when we detect any potentially dangerous software trying to steal their passwords or credit card numbers.

When staying protected is this simple... Why complicate?
